

Kruza Maxi

Object Oriented Lighting Solution

Fenos[®]
Light To Delight

Object Oriented

Object-oriented lighting, where the light spectrum aligns with an object's visual characteristics, is highly valued in retail and cultural spaces. Lighting designers typically invest substantial time, cost, and effort in selecting the right fixtures for optimal visual impact.

Lower CRI, Higher Saturation

Higher CRI

Kruza Maxi simplifies this process, offering a versatile solution for all these applications. It boasts easy installation, a familiar form factor, and leverages the latest in LED and control technology, combined with modern optics. Our design idea is to streamline object-oriented lighting, making it accessible and efficient for professionals across diverse settings

Easy user interface due to custom designed Bluetooth® driver,

Advanced Color Mixing optic for maximum uniformity

A large color gamut due to an engineered custom LED module

Secondary optic for modify the wide range of beam patterns
